

Fact sheet

Environmental Management System (EMS)

Our environmental vision is to be Australia's green port. We aim to operate the most environmentally responsible port in Australia based on the world's best practice in environmental management.

The port's environment includes over 150 hectares of mangroves at Fisherman Islands, roosting sites for 42 species of birds and extensive inter-tidal flats and seagrass areas.

We aim to limit the port's impact on the surrounding environment and has developed an environmental management system to manage impacts on the environment associated with its operations. Every activity undertaken by the port is assessed for environmental risk and the environmental management system plays a key role in all the ports decision-making.

The Corporation has many environmental objectives that govern its interactions with the surrounding environment.
