

ENVIRONMENTAL SERVICES

ABOUT THE PORT OF BRISBANE

Queensland's premier multi-cargo port and Australia's most diverse port, the Port of Brisbane facilitates significant trade and economic growth in a responsible, social and environmentally sustainable manner.

Here at the Port of Brisbane we operate in an environmentally sensitive area, with the Brisbane River, Moreton Bay Marine Park and internationally protected wetlands right on our doorstep.

While environmental management is a key component of the operations of all port businesses, we appreciate that additional advice or guidance may assist our customers in achieving optimum environmental performance at their sites.

PBPL's Environment Team can assist in the following areas:

- **Environmental permits**

We can provide general advice on environmental regulation and assist you to apply for new environmental permits or to amend, surrender or suspend your existing approvals where required.

- **Environmental management plans and operating procedures**

The PBPL Environment team can review your on-site operations and develop site-specific environmental management plans and environmental operating procedures. We can also review your existing Operational Environmental Management Plans and assist in revising them to meet current standards and operations at your site.

- **Internal environmental audit**

Internal audits of your company's performance against your own environmental management plans, licenses and permits or the ISO14001 standard for environmental management systems can be carried out on site. Upon completion of the audit we will provide a report of our assessment of your level of compliance.

- **Environmental advice**

The PBPL Environment team has experience across a range of areas including air and water quality, stormwater and waste management, and policy and strategy development, and would be happy to discuss any matters of interest that you may have on site. Where required, we can refer you to appropriate environmental consultants for specialist technical advice.

- **Solar**

We can assist you to review your electricity consumption data and provide advice on the suitability of solar energy and the solar energy options available.

PBPL's Environment Team can assist on all of these matters free of charge, subject to the conditions which you can view here www.portbris.com.au/EnvironmentT-C/
